

PRODUCT INFORMATION

SSL-1200 Vertical Sleeve Labeler

The SSL-1200 is a new generation of dual head vertical sleeve labelers that employs two synchronized heads for record-breaking speeds.

The SSL-1200 can be run as a single lane super machine or as a dual lane multifunctional machine capable of running sleeve labels and cap seals at the same time.

Sleeve Seal has created the most versatile, fastest machine in the market using the best components, the best materials and the best engineering.

Faster is always better.

Product Description & Specifications

Label Drive Train

The drive train of our labelers is constructed of high-grade, precision machined parts that are all built for a single purpose - to deliver a consistent stream of labels to your containers.

This robust, easy to adjust system is at the heart of all our high-speed sleeve label systems. The fast change mandrel provides the perfect sleeve profile to meet the incoming container no matter what shape or speed. It is also ideal for easy incorporation of new future formats.

Access Cabinet

All Sleeve Seal labeling machines are housed in heavy gauge stainless steel cabinets made with removable service doors for ease of maintenance and safety. Operators can manage operation and changeovers using our purpose built HMI and synchronized adjusters.

Cutter Box

Our patented cutter box utilizes four to six synchronized cutting blades for fast, precise cuts that won't leave jagged film ends. The unique modular design allows for easy change of blades or quick, tool-less changes to other cutter boxes when changing label format or container size.

Sleeve Seal cutter boxes use common, affordable utility blades that can be found in a local hardware store. Other blade types designed for use in harsh environments are also available.

SSL-1200 Production Rate:	1200 CPM*
Bottle Sizes:	25 - 130 mm diameter
Label Length:	25 - 300 mm
Label Thickness:	35 - 80 micron
Materials:	PVC, PETG, OPS

* Based on a label length of 180mm
